Involved in cell cycle regulation as a trans-activator that acts to negatively regulate cell division by controlling a set of genes required for this process. One of the activated genes is an inhibitor of cyclin-dependent kinases. Apoptosis induction seems to be mediated either by stimulation of BAX and FAS antigen expression, or by repression of Bcl-2

Sequence analysis of canine p53 in the region of exons 3-8.";

Sequence analysis of canine p53 in the region of exons 3-8.";

Cancer Lett. 92:181-186(1995).

-1- FUNCTION: Acts as a tumor suppressor in many tumor types; induces growth arrest or apoptosis depending on the physiological circumstances and cell type. Involved in cell cycle regulation as a trans-activator that acts to negatively regulate cell division by controlling a set of genes required for this process. One of the activated genes is an inhibitor of cyclin-dependent kinases. Apoptosis induction seems to be mediated either by stimulation of BAX and FAS antigen expression, or by repression of Bcl-2

Bishop R.R.P., Gobright E.E.I.;
Submitted (APR-1997) to the EMBL/GenBank/DDBJ databases.

1- FUNCTION: Acts as a tumor suppressor in many tumor types; induces growth arrest or apoptosis depending on the physiological circumstances and cell type. Involved in cell cycle regulation as a trans-activator that acts to negatively regulate cell division by controlling a set of genes required for this process. One of the activated genes is an inhibitor of cyclin-dependent kinases. Apoptosis induction seems to be mediated either by stimulation of

                                                                                             FUNCTION: Acts as a tumor suppressor in many tumor types; induces growth arrest or apoptosis depending on the physiological circumstances and cell type. Involved in cell cycle regulation as a trans-activator that acts to negatively regulate cell division by controlling a set of genes required for this process. One of the activated genes is an inhibitor of cyclin-dependent kinases, Apoptosis induction seems to be mediated either by stimulation of BAX and FAS antigen expression, or by repression of Bcl-2
DISEASE: p53 is found in increased amounts in of transformed cells. p53 is frequently mutate in many types of cancer.
SIMILARITY: BELONGS TO THE P53 FAMILY.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Nuclear protein;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Anti-oncogene; DNA-binding; Transcription regulation; Activator;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 BAX and FAS antigen expression, or by repression of Bc1-2 expression (By similarity).
SUBUNIT: Binds DNA as a homotetramer (By similarity).
SUBCELLULAR LOCATION: Nuclear.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FUNCTION: Acts as a tumor suppressor in many tumor types; induces growth arrest or apoptosis depending on the physiological circumstances and cell type. Involved in cell cycle regulation as a trans-activator that acts to negatively regulate cell division
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         SIMILARITY: BELONGS TO THE P53 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  by controlling a set of genes required for this process. One of
the activated genes is an inhibitor of cyclin-dependent kinases.
Apoptosis induction seems to be mediated either by stimulation c

The polypeptides and polypucleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polynucleotides encoding P2 or antigen presenting cells expressing P2 and then administered to the patient to inhibit

protein in heterogeneous cell population, treating proliferative disease (e.g. rheumatoid arthritis or cancer) associated with mutant protein or cellular protein isoform dependent on heat shock protein (HSP)-90 (e.g. p53), or selectively treating cells expressing mutant protein or cellular protein isoform in a patient heterozygous for (II). The method is useful for treating a disease e.g. haematopoietic disorder such as T or B cell lymphoma, chronic myeloid leukaemic poletic disorder such as T or B cell lymphoma, chronic myeloid leukaemic poletic disorder such as T or B cell control or a disease characterised by a solid tumour such as papillary thyroid carcinoma, Ewing's sarcoma, melanoma, liposarcoma, rhabdomyosarcoma and synovial sarcoma. The method is also useful for treating viral
                                                                                                                                                                                                                                                                             cell population, treating proliferative diseases associated with mutant protein or cellular protein isoforms (II) dependent on heat shock protein (HSP)-90, or selectively treating cells expressing (II) involving administering HSP90-inhibitor. The method is useful for treating genetically-defined disease with chromosomal aberration yielding oncogenic fusion protein, treating cancerous cells containing fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    diseases, involves

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Š
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          В
                                                                      The present invention describes isolated human lung carcinoma CC polynucleotides (I) and polypeptides (II). (I) and (II) have cytostatic CC activity, and can be used in gene therapy and in vaccines. Compositions CC comprising (I) or (II) can be used for stimulating an immune response in CC a patient and for treating lung cancer in a patient. Oligonucleotides of CC (I) can be used for detecting the presence of a cancer in a patient, by CC obtaining a biological sample from the patient, contacting the CC biological sample with the oligonucleotide, detecting in the sample, an CC amount of polynucleotide that hybridises to the CC comparing the amount of polynucleotide that hybridises to the CC comparing the amount of polynucleotide that hybridises to the CC plasmaceutical compositions, e.g. vaccines. (I) is useful as a marker to CC plasmaceutical compositions, e.g. vaccines. (I) is useful as a marker to CC indicate the presence or absence of a cancer such as lung cancer.

Human lung tumour proteins and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, Teali populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABL49395 to ABL49300 and ABB74946 to ABB75770 represent sequences used in the exemplification of the present

                                                                                                                   oncogenic fusion protein, treating cancerous cells containing fusion protein in heterogeneous cell population, treating proliferative disease (e.g. rheumatoid arthritis or cancer) associated with mutant protein or cellular protein isoform dependent on heat shock protein (HSP)-90 (e.g. p53), or selectively treating cells expressing mutant protein or cellular protein isoform in a patient heterozygous for (II). The method is useful for treating a disease e.g. haematopoietic disorder such as T or B cell lymphoma, chronic myeloid leukaemia (CML), APL, ALL, AML, NHL and CMML, or a disease characterised by a solid tumour such as papillary thyroid carcinoma, Ewing's sarcoma, melanoma, liposarcoma, rhabdomyosarcoma and synovial sarcoma. The method is also useful for treating viral infections. This is the amino acid sequence of a human oncogenic protein.
                                                                                                                                                                                                                                                                                                                                                             cell population, treating proliferative diseases associated with mutant protein or cellular protein isoforms (II) dependent on heat shock protein (HSP)-90, or selectively treating cells expressing (II) involving administering HSP90-inhibitor. The method is useful for treating genetically-defined disease with chromosomal aberration yielding oncogenic fusion protein, treating cancerous cells containing fusion
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention describes a method of treating genetically-defined disease associated with chromosomal aberrations yielding oncogenic fusion proteins (I), treating cancerous cells containing (I) in a heterogeneous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Treating genetically-defined disease associated with chromosomal aberrations yielding oncogenic fusion proteins, e.g. cell prolif diseases, involves administering an inhibitor of heat shock prot

               The present invention concerns the discovery of a new family of CC cell regulatory proteins (CRPs) termed the p63 family of proteins, CC which demonstrate certain sequence identity to known tumour suppressor proteins p53 and p73. Mouse p63 cDNA was isolated using CC RACE. Sequencing of the amplification product indicated that the CC amplified cDNA possessed a truncated N-terminus, i.e. the CC amplified by screening a cDNA library with a probe corresponding to exons 5-9 of p63. At least 6 different isotypes exist. Splice CC variants differing at the C-terminus are designated as alpha, beta CC and gamma forms, while p63 members differing in the N-terminus are CC designated as deltaN and TA forms, where the deltaN form lacks the CC transactivation domain. The present sequence represents mouse p63 isotype mu-deltaNp63 beta. p63 was detected in a variety of human and mouse tissue. It demonstrates remarkably divergent CC activities, such as the ability to transactivate p53 reporter genes and induce apoptosis. Cessation or down-regulation of p63 expression CC differentiation, both benign and neoplastic. DeltaN isotopes of p63 act as dominant negatives towards transactivation by p53 and p63. CC cachexia) and neuronal differentiation and related degenerative concepts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Mus

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ρ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC intron-exon organisation is conserved between p73 and p53, and from CC intron-exon organisation is conserved between p73 and p53, and from CC identify new members of this gene family using a PCR-based strategy CC of amplifying 2 exons in a conserved domain and their intervening CC intron. The human p53 gene was localised to chromosomal position CC 3q27-29. At least 6 different isotypes exist. Splice variants CC differing at the C-terminus have been designated as alpha, beta and CC gamma forms, while p63 members differing in the N-terminus are CC designated as deltaN and TA forms, where the deltaN form lacks the CC transactivation domain. The present sequence represents human CC p63 isotype hu-deltaNp63 alpha, p63 was detected in a variety CC of human and mouse tissue. It demonstrates remarkably divergent activities, such as the ability to transactivate p53 reporter genes CC and induce apoptosis. Cessation or down-regulation of p63 expression CC differentiation, both benign and neoplastic. DeltaN isotopes of p63 act as dominant negatives towards transactivation by p53 and p63. CC cachexia) and neuronal differentiation and related degenerative CC disorders. p63 polypeptides (see AAX5957-83) and anti-p63 antibodies of the invention can be used to CC identify compounds useful for treating disorders involving such CC identify compounds useful for treating disorders involving such CC remarkance of an and diagnosis, and in the production of transacric animals.

                                                                 CC protein (HSP)-90, or selectively treating cells expressing (II)
CC involving administering HSP90-inhibitor. The method is useful for
CC treating genetically-defined disease with chromosomal aberration yielding
CC oncogenic fusion protein, treating cancerous cells containing fusion
CC protein in heterogeneous cell population, treating proliferative disease
CC (e.g. rheumatoid arthritis or cancer) associated with mutant protein or
CC cellular protein isoform dependent on heat shock protein (HSP)-90 (e.g.
CP 53), or selectively treating cells expressing mutant protein or cellular
CC protein isoform in a patient heterozygous for (II). The method is useful
CC protein isoform in a patient heterozygous for (II). The method is useful
CC protein isoform myeloid leukaemia (CML), APL, ALL, AML, NHL and CMML,
CC or a disease characterised by a solid tumour such as T or B cell
CC lymphoma, chronic myeloid leukaemia (CML), APL, ALL, AML, NHL and CMML,
CC or a disease characterised by a solid tumour such as papiliary thyroid
CC arcinoma, Ewing's sarcoma, melanoma, liposarcoma, rhabdomyosarcoma and
CC synovial sarcoma. The method is also useful for treating viral
CC infections. This is the amino acid sequence of a human oncogenic protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Chromosome aberration; oncogenic fusion protein; cancer; oncogene; proliferative disease; cellular protein isoform; heat shock protein 9 HSP-90; rheumatoid arthritis; cancer; haematopoietic disorder; T cell lymphona; B cell lymphoma; chronic myeloid leukaemia; CML; acute myeloid leukaemia; AML; chronic myelomonocytic leukaemia; CMML; acute lymphoblastic leukaemia; AML; APL; NHL; solid tumour; papillary thyroid carcinoma; Ewing's sarcoma; melanoma; liposarcoma; rhabdomyosarcoma; synovial sarcoma; viral infection.

involving administrating HSP90-inhibitor. The method is useful for involving administrating HSP90-inhibitor. The method is useful for treating genetically-defined disease with chromosomal aberration yielding treating genetically-defined disease with chromosomal aberration yielding oncogenic fusion protein, treating cancerous cells containing fusion or concept in heterogeneous cell population, treating proliferative disease protein in heterogeneous cell population, treating proliferative disease protein in heterogeneous cell population, treating proliferative disease protein isoform dependent on heat shock protein or cellular protein isoform in a patient heterozygous for (II). The method is useful protein isoform in a patient heterozygous for (II). The method is useful protein isoform chronic myeloid leukaematopoletic disorder such as T or B cell lymphoma, chronic myeloid leukaematopoletic disorder such as papillary thyroid or a disease characterised by a solid tumour such as papillary thyroid or a disease characterised by a solid tumour such as papillary thyroid or a disease characterised by a solid tumour such as papillary thyroid or a disease characterised by a solid tumour such as papillary thyroid or a disease characterised by a solid tumour such as papillary thyroid or a disease characterised by a solid tumour such as papillary thyroid or a disease characterised by a solid tumour such as papillary thyroid or a disease characterised by a solid tumour such as papillary thyroid or a disease characterised by a solid tumour such as papillary thyroid or a disease characterised by a solid tumour such as papillary thyroid or a disease characterised by a solid tumour such as papillary thyroid or a disease characterised by a solid tumour such as papillary thyroid or a disease characterised by a solid tumour such as papillary thyroid or a disease characterised by a solid tumour such as papillary thyroid or a disease characterised by a solid tumour such as papillary thyroid or a disease characterised by a solid tumour
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention describes a method of treating genetically-defined disease associated with chromosomal aberrations yielding oncogenic fusion proteins (I), treating cancerous cells containing (I) in a heterogeneous proteins (I), treating proliferative diseases associated with mutant cell population, treating proliferative diseases associated with mutant protein contains protein isoforms (II) dependent on heat shock protein (HSP)-90, or selectively treating cells expressing (II) involving administering HSP90 inhibitor. The method is useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Disclosure; Page 346-348; 389pp;

The polypeptides and polynucleotides are especially lung cancer, in a patient. Methods described in the invention detection at subsequent time points and comparing the results from the are treated with P2, polynucleotides encoding P2 or antigen presenting development of cancer tells expressing P2 and then administered to the patient to inhibit
                                                                                                                                                                                                                                                                                                                                                 Sequence

The present invention describes isolated human lung carcinoma CC polynucleotides (I) and polypeptides (II). (I) and (II) have cytostatic CC activity, and can be used in gene therapy and in vaccines. Compositions CC apartient and for treating lung cancer in a patient. Oligonucleotides of CC (I) can be used for detecting the presence of a cancer in a patient, by cobtaining a biological sample from the patient, contacting the sample with the oligonucleotide, detecting in the sample, an CC comparing the amount of polynucleotide that hybridises to the oligonucleotide and CC comparing the amount of polynucleotide that hybridises to the oligonucleotide and CC comparing the amount of polynucleotide that hybridises to the oligonucleotide and CC comparing the amount of polynucleotide that hybridises to the oligonucleotide and CC comparing the amount of polynucleotide that hybridises to the oligonucleotide and CC configuration compositions, e.g. vaccines. (I) is useful as a marker to condicate the presence or absence of a cancer such as lung cancer.

CC ABG92145 to ABG92348 and ABG9186 to ABG9192 represent sequences used cin the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Дb

Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABIA4895 to ABIA4300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    identified by screening a cDNA library with a probe corresponding to exons 5-9 of p63. At least 6 different isotypes exist. Splice variants differing at the C-terminus are designated as alpha, beta and gamma forms, while p63 members differing in the N-terminus are designated as deltaN and TA forms, where the deltaN form lacks the casingted as deltaN and TA forms, where the deltaN form lacks the transactivation domain. The present sequence represents mouse p63 isotype mu-deltaNp63 alpha. p63 was detected in a variety of human and mouse tissue. It demonstrates remarkably divergent activities, such as the ability to transactivate p53 reporter genes and induce apoptosis. Cessation or down-regulation of p63 expression may play a critical role in the process of cervical squamous differentiation, both benign and neoplastic. DeltaN isotopes of p63 act as dominant negatives towards transactivation by p53 and p63.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present invention concerns the discovery of a new family of cell regulatory proteins (CRPs) termed the p63 family of proteins, which demonstrate certain sequence identity to known tumour suppressor proteins p53 and p73. Mouse p63 cDNA was isolated using RACE. Sequencing of the amplification product indicated that the amplified cDNA possessed a truncated N-terminus, i.e. the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated p63 cell regulatory protein for,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      cancer. The polypeptides and polynucleotides can be used to stimulate T cells or antigen presenting cells for use in the treatment of lung cancer. The polypeptides and monoclonal antibodies specific for the polypeptides can also be used to inhibit the development of lung cancer. Agents which bind the polypeptides can be used for detecting lung cancer and for monitoring the progression of lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention provides isolated human lung polypeptides. The polypeptides can be used

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AAB11317;
                                           This invention describes a novel isolated polypeptide (I) which comprising an immunogenic portion of a lung tumor protein or variant (P2) which have cytostatic activity. The polypeptides and polynuclectides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient, Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polynucleotides encoding P2 or antigen presenting cells expressing P2 and then administered to the patient to inhibit development of cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Lung cancer; therapy;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Wang
